Waqas Ahmad

Healthcare Software Engineer - FHIR · Athena · Epic | I build EHR integrations & health data pipelines that connect clinical systems and reduce manual sync time | Node.js · .NET · Angular
Rawalpindi, Punjab, Pakistan

Summary

If your clinical system doesn't talk to Athena or Epic — or data moves between systems through manual exports — I fix that. Over the past 4+ years I've built FHIR-compliant integrations and health data pipelines used in production across US-based healthcare clients. That includes patient data sync, EHR API integrations, HIPAA-compliant backends, and custom admin portals for clinical operations teams. What I work on: → FHIR R4/STU3 client integrations (Athena, Epic, open-source EHRs) → HL7 message parsing and transformation pipelines → HIPAA-compliant REST APIs in .NET Core and Node.js → Healthcare SaaS platforms with Stripe billing and multi-tenant architecture → Angular and React dashboards for clinical staff I write production-grade code — not prototypes. I handle security, error handling, and logging from day one because in healthcare, unreliable data isn't just inconvenient, it's a liability. Currently taking on freelance projects. If you're building a healthcare product and need an engineer who understands the domain, not just the technology, message me or connect.

Experience

Upwork

Freelance Full Stack Engineer | SaaS & Healthcare Applications
February 2026 - Present (7 months)

https://www.upwork.com/freelancers/waqasahmad2024?mp_source=share

I work as an independent Full Stack Engineer, delivering scalable web applications, SaaS platforms, and healthcare systems for international clients. I specialize in designing secure backend architectures, RESTful APIs, and modern frontend interfaces with a strong focus on performance, clean code, and maintainability.

Backend: .NET Core, C#, Node.js, Express.js, NestJS

Frontend: Angular, React, Vue

Database: SQL Server, MySQL

Healthcare Expertise: HL7, FHIR, EHR/EMR Integrations, HIPAA-Compliant Systems

Other Expertise: Admin Dashboards, SaaS Development, Payment Integrations (Stripe), API Integrations

I have successfully delivered end-to-end solutions including healthcare management systems, subscription-based SaaS platforms, custom dashboards, and complex API-driven applications that are used in production by international clients.

Fiverr

Freelance Full Stack Engineer | Healthcare & SaaS Specialist

February 2026 - Present (7 months)

Punjab, Pakistan

<https://www.fiverr.com/s/8zqdBrV>

I deliver scalable web applications, SaaS platforms, and healthcare systems for international clients. I specialize in secure backend architectures, RESTful APIs, and modern frontend interfaces with a strong focus on performance, clean code, and maintainability.

Skills & Expertise:

Backend: .NET Core, C#, Node.js, Express.js, NestJS

Frontend: Angular, React, Vue

Database: SQL Server, MySQL

Healthcare: HL7, FHIR, EHR/EMR Integrations, HIPAA-Compliant Systems

Other: Admin Dashboards, SaaS Platforms, Payment Integrations (Stripe), API Integrations

I have delivered end-to-end solutions including healthcare management systems, subscription-based SaaS platforms, custom dashboards, and complex API-driven applications used by international clients.

NTG Clarity

Full Stack Developer

February 2025 - January 2026 (1 year)

Cairo, Egypt

- ✓ Technical Support & Troubleshooting – Investigate and resolve Level 2 technical issues, reducing system downtime and improving efficiency.
- ✓ Incident & Problem Management – Handle escalated issues, conduct root cause analysis, and implement long-term solutions.
- ✓ Windows & Linux System Administration – Manage servers, perform system updates, and ensure security compliance.
- ✓ Network & Server Support – Troubleshoot network connectivity, server performance, and cloud-based infrastructure.
- ✓ IT Service Management (ITSM) – Follow ITIL best practices for service requests, incident management, and system monitoring.
- ✓ Application & Database Support – Work closely with development teams to resolve application-related issues and database performance concerns.
- ✓ Process Automation & Optimization – Implement automation tools and scripting to enhance operational efficiency.

Wiseman Innovations

Software Engineer

January 2022 - February 2025 (3 years 2 months)

Islāmābād, Pakistan

Designed and built FHIR-compliant integrations connecting third-party healthcare applications with Athena and Epic EHR systems — enabling automated patient data sync and eliminating manual data entry across clinical workflows.

Key work:

- Built FHIR R4 client integrations against Athena and Epic APIs, handling Patient, Observation, Encounter, and MedicationRequest resources with full error handling and retry logic
- Designed layered .NET Core architecture (presentation → application → domain → data access) for maintainable, testable healthcare backends — with dependency injection and interface-driven design throughout
- Implemented HIPAA-compliant security controls including role-based access, audit logging on all PHI access, and encrypted data transmission
- Collaborated directly with Athena and Epic technical teams to troubleshoot scope permissions, sandbox vs production discrepancies, and data model differences across implementations
- Built RESTful APIs for data exchange between healthcare systems, with structured logging and error reporting that made production incidents diagnosable within minutes

→ Improved patient data reliability by catching and handling edge-case FHIR resource structures (malformed valueQuantity fields, missing identifiers, inconsistent coding systems) that silent failures typically miss

DAO PropTech

Full Stack Engineer

April 2021 - December 2021 (9 months)

Rawalpindi, Punjab, Pakistan

Node.js, Express.js, and MySQL Development:

Developed a secure property portal and marketplace utilizing Node.js, Express.js, and MySQL.

Implemented blockchain technology to ensure secure and tamper-proof property transactions.

API Development:

Created APIs with endpoints for user authentication, property management, secure payment, transaction history, and marketplace management.

Blockchain Integration:

Leveraged blockchain technology to provide transparent transactions for property buying, selling, and renting.

Angular Development:

Developed a user-friendly property portal with secure payment and marketplace features using Angular.

Ensured a responsive and interactive front-end experience for users.

Marketplace Functionality:

Implemented marketplace functionalities including managing listings, filtering options, and secure payment integration.

Secure Data Management:

Ensured secure storage and retrieval of user and transaction data using MySQL.

Comprehensive Solution:

Provided a robust solution for building secure and transparent property portals with marketplace capabilities.

Holodeck Technologies
Full Stack Engineer
February 2021 - April 2021 (3 months)
Rawalpindi, Punjab, Pakistan

Zone Technologies
Full Stack Engineer
December 2019 - February 2021 (1 year 3 months)
Pakistan

Uber Application API:

Node.js (Express) Development: Built a scalable and secure platform for handling user authentication, ride management, payments, and real-time location tracking.

Database Connectivity: Connected to both MySQL and MongoDB databases for efficient data management.

Error Handling and Security: Implemented encryption, validation, and error handling to ensure the privacy and security of user data.

Chat Application API:

Node.js (Express) Development: Developed a robust platform for real-time communication between clients.

Database Connectivity: Utilized MySQL and MongoDB databases for storing user and chat history.

Error Handling and Security: Implemented password encryption, validation, and error handling to safeguard user data.

Bank Application API:

Node.js (Express) Development: Created a secure and scalable platform for managing banking transactions.

Database Connectivity: Connected to both MySQL and MongoDB databases for efficient data storage.

Error Handling and Security: Implemented password encryption, validation, and error handling to ensure the privacy and security of user data.

Overall Security and Scalability:

Comprehensive Solution: Provided a secure and scalable solution for building applications with features like user authentication, data management, and transaction handling.

CareCloud

Intern

May 2016 - October 2019 (3 years 6 months)

Northern Punjab Rawalpindi, Pakistan

During my internship, I contributed to various projects, showcasing my skills in software development, user experience design, and project management:

Employee Training Website Development:

Collaborated with the development team to create a user-friendly website for employee training.

Integrated video, PDF, and image tutorials, ensuring accessibility from any device.

Implemented features like progress tracking and reporting to monitor training effectiveness.

Resulted in improved employee skills and knowledge, enhancing organizational productivity.

Account Management System Development at CareCloud:

Contributed to the development of an account management system for Medigain post-acquisition.

Utilized AngularJS to enhance user experience and functionality.

Gained hands-on experience in software development within a dynamic, collaborative environment.

Kiosk System Development at CareCloud:

Developed a user-friendly kiosk system using .NET technology for canteen and ration store orders.

Supported English and Urdu languages for diverse user populations.

Streamlined the ordering process, enhancing user experience for corporation employees.

Overall, my internship experiences have equipped me with valuable skills in software development, user experience design, and project management, contributing to the success of various projects and organizations.
